

SISMO SFTP FILE UPLOADER

SftpClient Application

The SftpClient is a Java-based application designed to connect to an SFTP server and upload files to a specified directory on the server. It is cross-platform and can be configured to run on Windows, macOS, and Ubuntu.

Features

- **Secure SFTP Integration:** Connect reliably and securely to an SFTP server for file transfer.
 - **Cross-Platform Support:** Run seamlessly on Windows, macOS, and Ubuntu.
 - **Task Scheduling:** Automate file uploads by scheduling application execution.
 - **Configurable Environment:** Customize behavior using environment variables.
-

Quick Start

To get started quickly, download the pre-packaged zip file for your operating system, extract its contents, and follow the platform-specific instructions provided.

1. **Download the Zip File:**

- [macOS Zip File](#)
- [Windows Zip File](#)
- [Ubuntu Zip File](#)

2. **Extract the Files**

Use your preferred tool to extract the zip file to a directory of your choice.

3. **Follow the Instructions**

In the extracted directory, refer to the appropriate README files for your operating system. Each OS has two versions of the README (PDF and Markdown) containing identical instructions:

- Windows: [README_WINDOWS.md](#) and [README_WINDOWS.pdf](#)
 - macOS: [README_MACOS.md](#) and [README_MACOS.pdf](#)
 - Ubuntu: [README_UBUNTU.md](#) and [README_UBUNTU.pdf](#)
-
