

SISMO SFTP FILE UPLOADER

SftpClient Application

The SftpClient is a Java-based application designed to connect to an SFTP server, and upload it to a specified directory on the server. This application is cross-platform and can be configured to run on Windows, macOS, and Ubuntu.

Features

- **SFTP Integration:** Securely connect to an SFTP server for file transfer.
 - **Cross-Platform Support:** Compatible with Windows, macOS, and Ubuntu.
 - **Task Scheduling:** Automate the execution of the application at a specified time.
 - **Customizable Environment:** Configure environment variables to suit your specific needs.
-

Quick Start

To get started quickly, you can download the pre-packaged zip file for your operating system, extract the files, and follow the instructions in the corresponding README file:

1. **Download the Zip File:**
 - [macOS Zip File](#)
 - [Windows Zip File](#)
 - [Ubuntu Zip File](#)
 2. **Extract the Files:**
 - Use your preferred tool to extract the zip file into a directory of your choice.
 3. **Follow the Instructions:**
 - Navigate to the extracted directory and refer to the appropriate README file for your operating system. Each operating system has two README files (PDF and Markdown) with the same information:
 - for Windows: [README_WINDOWS.md](#) and [README_WINDOWS.pdf](#)
 - for macOS: [README_MACOS.md](#) and [README_MACOS.pdf](#)
 - for Ubuntu: [README_UBUNTU.md](#) and [README_UBUNTU.pdf](#)
-
